NO. 50 ELECTRIC

BOSTON®

LETTER OPENER

This new BOSTON Electric No. 50 Letter Opener handles your daily office mail in **one-tenth the time** the same chore takes by hand! It occupies only a third the space of an electric typewriter yet it saves the most valuable time of day by putting your office on the orders, correspondence and daily problems as much as an hour sooner. With its initial low cost, the BOSTON No. 50 will pay for itself more quickly than most office appliances.

This BOSTON Electric trims an accurate thin edge off envelopes of all sizes neatly without disturbing or exposing its contents.

You can use any standard letter tray to catch envelopes and cuttings. These inexpensive trays are readily available through your office supplier. The BOSTON is designed with parts mobility so that it can easily be self serviced. The exclusive SELF-SHARPENING BLADES feature adds greatly to a remarkable life capability. Handsomely styled with pleasing clean cut looks to match its efficient service.

CAN ANY COMPANY AFFORD TO LET EMPLOYEES WAIT FOR THEIR MAIL?

Some suggestions for METHODS and SYSTEMS ENGINEERS

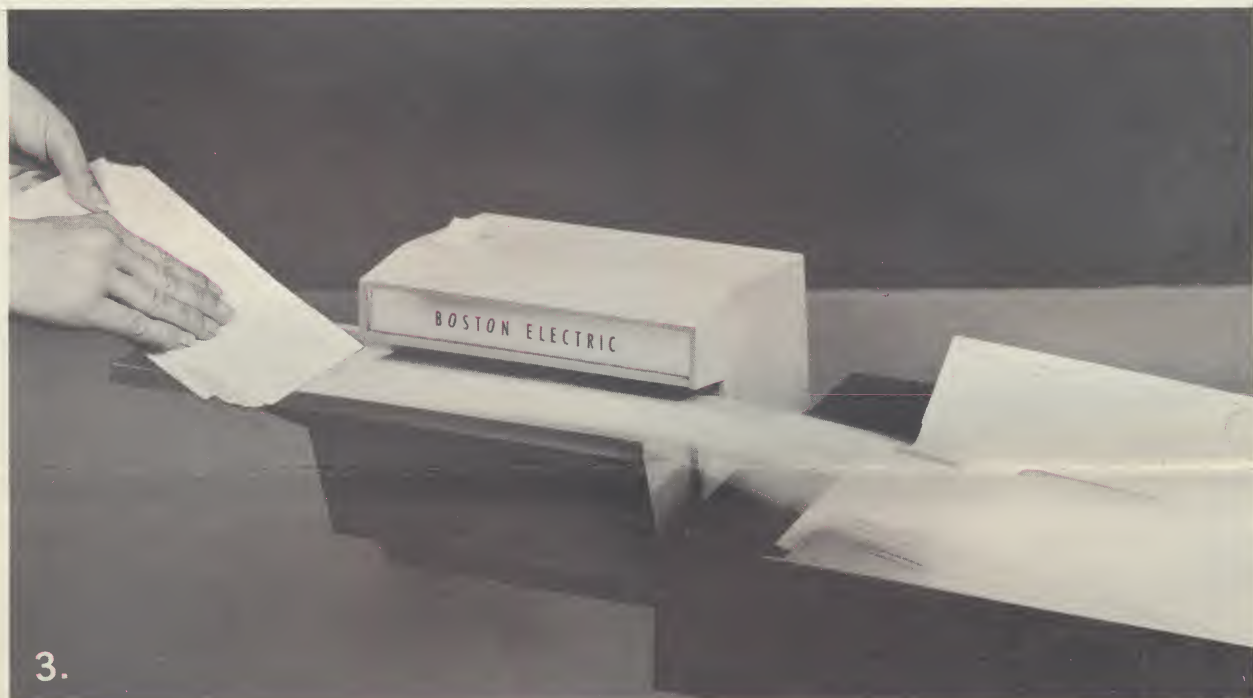

The low initial cost of the BOSTON Electric Letter Opener makes possible a whole new methods concept for opening mail. Most mail has to be sorted before opening and generally it would be much faster and efficient to assign a BOSTON Electric to each department's mail. Such important departments as accounting or orders can be on their mail in a few minutes after sorting and routing. Since the BOSTON Electric costs less than \$50.00, the buying decision can be made on the basis of efficiency and immediate savings.

If only 5 minutes are saved in this operation—and 6 people are dependent on this mail to start their day's work, 30 minutes a day are saved; 2½ hours a week; 130 hours a year. At a minimum wage rate of \$1.25 an hour, \$162.50 would be annual saving.

LE MORE TIME FOR MORE IMPORTANT JOBS

TIME SAVING METHODS FOR OPENING MAIL WITH THE Boston no. 50

1. Sort mail so that same size envelopes are grouped into separate stacks.
2. Tap or 'jog' stack of envelopes. By tapping them sharply on table a few times you will cause paper clips or enclosures to move away from the extreme edge of envelopes which will be opened.

3. Hold stack of envelopes in left hand against the retaining edge of the feed table. Feed off the top of stack into the feed wheels which automatically pick up the envelopes for opening.
